WORKPLACE RECYCLING LEGISLATION

IS YOUR SITE READY?

Your guide to the new **Workplace Recycling Regulations**
and the recycling systems you need to implement.

Building Value

ARE YOU PREPARED FOR THE NEW UK WASTE MANAGEMENT LEGISLATION?

The new legislation aims to enhance recycling efforts across England by standardising recycling practices and ensuring more consistent waste collection – supporting our transition towards a more sustainable circular economy.

31ST MARCH 2025

Businesses in England with more than 10 full time employees must implement separate recycling schemes for all recyclable waste streams, excluding garden waste and plastic film.

31ST MARCH 2027

Businesses in England with no more than 10 full time employees must recycle all recyclable waste streams, excluding garden waste.

HOW WILL THIS IMPACT YOUR BUSINESS?

Businesses in England will be required to adhere to the new regulation requirements. Your business will likely need to review and adjust waste handling practices and invest in onsite recycling systems and waste collection.

PENALTIES FOR NON-COMPLIANCE

From April 2025, the general public and other parties will be able to report workplaces that do not follow these regulations to the Environment Agency.

Non-compliance with these laws can lead to hefty fines.

MANAGING WASTE STREAMS

YOUR GUIDE TO THE NEW REGULATIONS

The new requirements for most workplaces is separate containers for:

Don't forget to check with your waste collection partner how they plan to collect recycled waste from your facility!

GLASS

METAL

PLASTIC

PAPER & CARDBOARD

FOOD WASTE

Business need to arrange the separate collection of food waste – ideally for treatment via anaerobic digestion.

NON-RECYCLABLE WASTE

Non-recyclable waste should be collected separately to prevent contamination of recyclable materials.

CHOOSING THE RIGHT RECYCLING SYSTEM

With so many options, selecting the right recycling system for your facility can be challenging. Here's what to consider when making your choice:

1. MODULARITY

A modular system allows easy separation of waste into the appropriate stream, minimising the risk of cross-contamination, and maximising correct recycling by users.

2. SIGNAGE & COLOUR CODING

Use clear, striking, colour-coded signage to indicate each waste stream, ensuring users understand what type of waste can be recycled and where.

3. DIFFERENT AREAS

A one-bin-fits-all isn't effective. Choose robust containers for back-of-house, sleek systems for front-of-house and slim containers for tight spaces.

4. DURABILITY

Invest in long-lasting, durable recycling containers reduces costs, and ensures a longer product lifespan.

INTERNAL RECYCLING SYSTEMS

From robust containers for back-of-house, sleek systems for front-of-house and slim containers for tight spaces, we have options to suit all requirements.

Electra™ Recycling Bins

Designed with modern environments in mind, the Electra™ range is ideal for creating a unique, coordinated waste management programme.
